

ABSTRACT OF THE INVENTION

A method and system for displaying metadata included in one or more media files. A media library stores one or more media files. A graphical user interface displays metadata of the one or more media files in the media library via a display. A media player application parses data contained in metadata fields of a media file to identify one or more properties of the media file. The user interface allows a user to view each identified property within a metadata field of the media files in a hierarchical format.
